The **P&L SPECIALTIES AUTOMATED PICKING LUG WASHER** is the solution for washing quantities of picking lugs. It delivers labor savings, reduces waste water, and reduces water consumption. The picking lugs are conveyed through a two-stage, 360° cleaning process. The initial stage features a high pressure wash to remove particles and stubborn material. The second stage features a high temperature, high pressure rinse to ensure cleanliness. Both stages are internally screened and filtered to assure consistent results and minimize water consumption.

The **AUTOMATED PICKING LUG WASHER** operates on 240V/480V electrical power and uses domestic water to fill and maintain tank water levels. The machine features all stainless steel construction for longevity and is manufactured using the finest components. Adjustable guides allow for 40# and 60# picking lugs.

EASY TO OPERATE AND MAINTAIN

EFFICIENT • RELIABLE • SAFE

PROUDLY BUILT IN THE U.S.A.
